

Introduction to Carbon Capture and Storage

This course is designed to equip a range of employees and supply chain workers with a basic knowledge of how Bioenergy with Carbon Capture Storage (BECCS) works and the theory and practice behind the technology.

What the course will cover:

- Compressors and associated equipment
- Gas Absorption
- Heat Exchangers
- Materials Technology

How will the course be delivered?

Delivered within Selby College's brand-new Institute of Technology (IoT) centre, learners will have the opportunity to use cutting-edge technology and training equipment.

The course includes approx. 120 Guided Learning Hours, split between face-to-face learning, online learning and some independent study.

When does the course start?

The pilot course is currently being rolled out to 27 of Drax Power Station's employees. The programme will be available to other organisations and individuals following this.

If you are interested in putting your employees forward for this course, contact our Business Services team on scbs@selby.ac.uk or 01757 211097
